Google auto-banned my Bug Hunter account for exposing their fake "Delete" button (GDPR / Dark Pattern Fraud)

medium.com

Beer1888 posztolta, ide:  Fuck AI English · 21 perccel ezelőtt

Imagine you have a secret diary in a bank vault and a map to find it. You ask the bank to destroy the diary. The bank burns the map in front of you, says "The diary is permanently destroyed, this cannot be undone," but quietly keeps your diary open and active in the vault.

This is exactly what Google is doing with user data in Google AI Studio and Google Drive. I have been fighting them for over a year on this, and today, when I submitted the final, undeniable proof to their Vulnerability Reward Program (VRP), their automated bot banned me for life within 60 seconds.

The Technical Flaw: "Placebo Deletion" (CWE-459) When you click "Delete permanently" in Google AI Studio, Google does NOT trigger a cascade-delete in their backend (Interactions API / Project Storage). They merely unlink the client-side .json pointer in your Drive. The actual sensitive session data, tokens, and system prompts remain fully intact in active "hot storage". How do I know? Because if you use Google's official recovery tool to restore that tiny .json

következőt a

pointer 48 hours later, the AI chat session resumes seamlessly in milliseconds. Cold-storage or purged data does not respond in milliseconds. The "Delete" button is a visual Placebo.

The 4-Point Checkmate (Why they can't defend this): I didn't invent anything. I just put Google's own official documents next to each other.

The Two-Faced Lie (UI vs. Documentation): The UI explicitly states: "The item will be permanently deleted and cannot be recovered later." Google's official Help Center states: "Our automated tool can help recover permanently deleted files..." Fact: You cannot recover something that is permanently destroyed. This is textbook Deceptive Design (Dark Pattern).

The API SLA Bypass: Google's official Gemini API documentation guarantees a 24-hour Time-To-Live (TTL) auto-purge. By unlinking the pointer and keeping the session active in the backend for 25+ days for "recovery", they are deliberately bypassing their own security documentation and violating GDPR Article 17 (Right to Erasure).

The "Intended Behavior" Confession: When I initially reported this via IssueTracker, their bot labeled it as "Won't Fix (Intended Behavior)". They officially put it in writing that lying on the UI and bypassing the TTL is a deliberate architectural decision, not a bug.

Learn about Medium's values 4. Arguing with Themselves: If this goes to court, Google doesn't have to argue with me. Their lawyers will have to explain to a judge why their UI team, their API documentation, and their Help Center are all making completely contradictory claims about user data destruction.

The Punchline: The VRP Ban Today, I created a clean bug report outlining these 4 points and submitted it to the Google VRP (Bug Hunter) program.

At 04:10 AM, I submitted the report. At 04:11 AM, I received the automated "Thank you" email. At 04:11 AM, I received a permanent ban email. Without human review, the automated system banned me, stating: "Our VRPs are built on key pillars of respect, constructive collaboration, and good faith... your account has been permanently excluded."

"We did it, Patrick! We made a technological breakthrough!"

A place **for all those who loathe AI** to discuss things, post articles, and ridicule the AI hype. Proud supporter of working people. *And proud booer of SXSW 2024.*

AI, in this case, refers to LLMs, GPT technology, and anything listed as "AI" meant to increase market valuations.

Láthatóság: Nyilvános

Ez a közösség bevonható más szerverek szövetségébe, és azok

Let that sink in. A company that built a fake delete button, bypasses its own data destruction policies, and lies to billions of users just banned a security researcher with an automated script for lacking "good faith."

I have forwarded the entire forensic dossier to the CISA and European privacy watchdogs (NOYB). If Google won't fix their architecture for a bug bounty, they will have to explain their "Special Recovery Robot" to the GDPR regulators.
