Dear NOYB Team,

Following my previous outreach regarding Google's structural violation of GDPR Article 17 in Google AI Studio / Gemini API, I am contacting you with a massive development that elevates this case from an individual privacy complaint into a **systemic corporate compliance fraud affecting European enterprise customers**.

I have conclusively proven that Google's "Delete" mechanism is a complete technical illusion:

1. **The UI Placebo:** Pressing "Delete" in Google AI Studio only trashes a client-side `.json` metadata file in Google Drive. Zero deletion commands are sent to the backend server (Interactions API).
2. **The Backend Zombie:** If the user empties the Drive Trash, Google's own Drive Recovery Tool resurrects the `.json` file weeks later. Because the backend never purged the data, the AI session resurrects instantly with 100% of its history and tokens.
3. **The Enterprise Fraud (The Smoking Gun - Discovered Sept 22):** Workspace and Enterprise clients pay premium fees for custom Data Retention policies (e.g., 7-day TTL). My testing proves that on Day 20+, restoring the `.json` pointer resurrects the chat anyway. **Google's backend completely ignores custom, paid retention TTLs.**

Why This is the Ultimate Case for NOYB:

- **Written Corporate Admission:** Google VRP closed the report (ID: 564878654) as **"Intended Behavior"**—officially admitting that retaining deleted data on production servers is a deliberate feature, not an engineering bug.
- **Whistleblower Censorship:** Google banned me from VRP in 60 seconds and deleted over 140 of my technical posts from their developer forums.
- **Irrefutable Proof of Service:** I possess a signed postal return receipt proving Google LLC's central Legal Department in Mountain View received physical notice of this on **May 9, 2026**. They chose to ignore it and cover it up.
- **Media & Industry Validation:** *AI Weekly* has officially verified the forensic chain and issued an industry alert, warning enterprise teams that Google AI Studio deletion is merely "UI-level."

Google is actively deceiving millions of European users and thousands of EU businesses that rely on these retention settings to fulfill their own GDPR obligations.

I have assembled an airtight, timestamped evidentiary dossier (video forensics, server logs, Buganizer exports, and postal receipts). I am preparing civil court proceedings under GDPR Article 79/82, but given the scale of this deceptive design (Dark Pattern) and corporate fraud, this case belongs in the hands of NOYB for a coordinated European legal strike.

All files and archives are ready for your review. Please let me know how you wish to proceed.

Best regards,

György Istókolics (Bitu79)
